DEPARTMENT OF HAEMATOLOGY

Prothrombin Time (PT)

TEST NAME	RESULT	UNITS	BIOLOGICAL REFERENCE INTERVAL
Prothrombin Time	: **29.9**	Seconds	13.6-16.8
Method : Electromechanical Clot Detection.			
Mean Normal Prothrombin Time (MNPT)	: 15.1	Seconds	
International Normalized Ratio (INR)	: **1.99**		0.93-1.17 Therapeutic 2.0 -4.0
Method : Calculated			

Interpretation:

MNPT : Mean Normal Prothrombin Time

The prothrombin time (PT) and international normalized ratio (INR) are measures of the extrinsic pathway of coagulation.
Increased PT may be due to:
l.Factor deficiencies, VII,X, V, II and afibrinogenemia (complete absence of factor I)2.Coumadin (warfarin) therapy 3.Liver Disease (Bile duct obstruction, cirrhosis, hepatitis)
4.Hemolytic Disease of the Newborn
5.DIC
6.Malabsorption
7.Fibrinolysis
8.Vitamin K deficiency

Interference in PT and INR:
I .Alcohol, antibiotics, aspirin, cimetidine, thrombin Inhibitors (Increased PT)
2. Barbiturates, oral contraceptives, hormone-replacement therapy (HRT), and vitamin K (Decreased PT).

Note: Dacie and Lewis Practical Hematology,12th Edition.

Note :- Suggested Clinical Correlation *

DEPARTMENT OF CLINICAL BIOCHEMISTRY

Glucose, Fasting (FBS)

TEST NAME	RESULT	UNITS	BIOLOGICAL REFERENCE INTERVAL
Fasting Plasma Glucose *Method : Hexokinase*	: 96	mg/dL	Normal : 70 - 100 Prediabetes :100-125 Diabetic : >/=126

Interpretation:

Criteria for diagnosis of Diabetes mellitus.

FPG >/=126 mg/dL, Fasting is defined as no caloric intake for atleast 8 hours.

Remarks:

Fasting hypoglycemia may be observed in persons taking certain diabetes medications, antibiotics and alcoholic beverages. Additionally intestinal disorders, endocrine disorders, insulin surge, nature of diet, reduced food intake than usual and stress are among several other factors. Please correlate clinically.

Reference: American Diabetes association guidelines 2021.

Note **:-** Suggested Clinical Correlation *
